

# AUSTRALIAN JOURNAL OF *EARTH* SCIENCES

## INSTRUCTIONS TO AUTHORS

The *Australian Journal of Earth Sciences (AJES)* is the official journal of the Geological Society of Australia. *AJES* is published in 8 issues per year in print and on-line in full colour at no cost to authors. The Journal publishes high quality peer reviewed scientific papers on all aspects of Earth and planetary sciences. There is a focus on the Australian plate, the Asia-Pacific region and Antarctica but papers on areas outside these regions will be considered if the subject matter is of a broad scientific interest with an international appeal. Proposals for thematic issues featuring a selection of related papers are welcome and should be sent to the Editor-in-Chief (Editor).

*AJES* welcomes Review papers, Research papers, Letters, Comments and Discussions.

The acceptance criteria for all papers are the quality and originality of the research and its significance to readership. Authors should have their papers peer reviewed before submission. In addition, all manuscripts will be reviewed by at least two referees selected by the Editors or Associate Editors. Authors can suggest preferred or non-preferred referees when entering their manuscript files into the ScholarOne Manuscript™ site. The Editor will make the final decision concerning acceptance or rejection of a paper. The Editor reserves the right to refuse any material for publication.

## OPEN ACCESS

You have the option to publish open access in this journal via our Open Select publishing program. Publishing open access means that your article will be free to access online immediately on publication, increasing the visibility, readership and impact of your research. Articles published Open Select with Taylor & Francis typically receive 32% more citations\* and over 6 times as many downloads\*\* compared to those that are not published Open Select.

Your research funder or your institution may require you to publish your article open access. Visit our [Author Services](#) website to find out more about open access policies and how you can comply with these.

You will be asked to pay an article publishing charge (APC) to make your article open access and this cost can often be covered by your institution or funder. Use our [APC finder](#) to view the APC for this journal.

Please visit our [Author Services website](#) or contact [openaccess@tandf.co.uk](mailto:openaccess@tandf.co.uk) if you would like more information about our Open Select Program.

\*Citations received up to Jan 31st 2020 for articles published in 2015–2019 in journals listed in Web of Science®.

\*\*Usage in 2017–2019 for articles published in 2015–2019.

## SUBMISSION OF MANUSCRIPTS

All articles submitted to the journal must comply with these instructions. Papers are accepted for publication only if the content has not been published or submitted for publication elsewhere; they largely contain previously unpublished material; and all co-authors agree to the submission.

Papers for consideration must be submitted *via* ScholarOne Manuscript™: (<http://mc.manuscriptcentral.com/taje>). Instructions on how to submit are listed on the site under User Tutorials. Submissions must be uploaded as MSWord documents (text and tables as separate files) with figures uploaded **separately** as high resolution (300 dpi) JPEGs, .eps, .tiff (for images) or PDF (for black and white line drawings only). Any queries please email [AJES.Editor@gsa.org.au](mailto:AJES.Editor@gsa.org.au).

As part of the on-line submission, you are requested to identify sources of funding for your research and/or preparation of the article and to briefly describe the role of the sponsor(s), if any, in study design; in the collection, analysis and interpretation of data; in the writing; and in the decision to submit the article for publication.

The system automatically converts source files to a single PDF file of the article, which is used in the peer-review process. Although manuscript source files are converted to PDF files at submission for the review process, these source files are needed for further processing after acceptance. All correspondence, including notification of the Editors' decision and requests for revision, is by e-mail ensuring a record of the reviewing and editorial processes.

## Data Sharing Policy

This journal applies the Taylor & Francis [Open Data + FAIR policy](#). Authors are required to make the data and materials supporting the results or analyses presented in their paper freely available. A CCBY, CC0 or equivalent license should be applied to any datasets to allow reuse by any third party for any lawful purpose. Data should meet with FAIR standards established by the subject area.

Please note that data should only be shared if it is ethically correct to do so, where this does not violate the protection of human subjects, or other valid ethical, privacy, or security concerns.

Authors are required to deposit the dataset(s) in a recognised data repository that can mint a persistent digital identifier, preferably a digital object identifier (DOI) and recognises a long-term preservation plan. If you are uncertain about where to deposit your data, please see [this information](#) regarding repositories.

Authors are required to cite any data sets referenced in the article and provide a [Data Availability Statement](#).

At the point of submission, you will be asked if there is a data set associated with the paper. If you reply yes, you will be asked to provide the DOI, pre-registered DOI, hyperlink, or other persistent identifier associated with the data set(s). If you have selected to provide a pre-registered DOI, please be prepared to share the reviewer URL associated with your data deposit, upon request by reviewers.

Where one or multiple data sets are associated with a manuscript, these are not formally peer reviewed as a part of the journal submission process. It is the author's responsibility to ensure the soundness of data. Any errors in the data rest solely with the producers of the data set(s).

## Copyright

Papers accepted for publication become copyright of the Geological Society of Australia and authors will be asked to authorise a transfer of copyright form. In authorising the transfer of copyright, it is assumed that authors have obtained permission to use any copyrighted or previously published material. All authors must read and agree to the conditions outlined in the Copyright Assignment Form and must sign the form or agree that the corresponding author can sign on their behalf.

Articles cannot be published until a signed Copyright Assignment Form has been received. Authors in Government institutions where the Crown retains copyright are exempt from transfer of copyright to the Society. Where the Crown prevails, we require a non-exclusive transfer of copyright to be submitted with the paper.

Permission of the Publisher is required for resale or distribution outside the institution and for all other derivative works, including compilations and translations. If excerpts from other copyrighted works are included, the author(s) must obtain written permission from the copyright owners and credit the source(s) in the article.

## PREPARATION OF THE MANUSCRIPT

General guides for preparation of manuscripts for journal publication can be found at: <http://journalauthors.tandf.co.uk/preparation/writing.asp>

Manuscripts should be written so that they are intelligible to the professional reader who is not a specialist in the field. **Research articles** reporting original research should generally not exceed 5000 words, while **Review articles** in any field of Earth science may be up to 10 000 words. **Letters**, not exceeding eight A4 pages (including tables and figures), will be given priority in publication. **Discussion and replies** of recently published papers should generally not exceed four A4 pages. Longer articles and discussions may be accepted but should be discussed with the Editor before submission.

## Manuscript formatting

Submissions should be single column, double-spaced with the top, bottom and side margins 25 mm. All pages should be numbered consecutively.

The layout of the text should be as simple as possible; do not use the word processor's options to justify text or to hyphenate words. However, do use bold face, italics, subscripts, superscripts etc where required and when preparing tables, if no grid is used, use tabs, not spaces, to align columns.

## Parts of the manuscript

Manuscripts of all articles should be presented as follows: Title page (including title, authors with ORCID, contact details); Abstract; 3-4 Key points; Keywords; Text; References; Table and Figure captions; Tables; Appendices (if any); and Figures. Letters do not need an abstract.

The title should begin with a key word, be short and informative, and succinctly state the main findings of your research.

Authors may use up to four levels of headings, all of which are left justified. Heading levels should be clearly identified by use of different font styles. Heading levels are not numbered.

### *Abstract, Key Points and Keywords*

The abstract should provide a concise summary of the results (rather than the contents) and should not exceed one paragraph of 300 words. It should not contain abbreviations or references. Three or 4 key points should be added at the end of the abstract. Six to 10 keywords should also be supplied.

### *Acknowledgements*

The contribution of colleagues or institutions, and reviewers should also be acknowledged.

### *Source of funding*

The source of financial grants and other funding should be acknowledged including grant numbers where available.

### *References*

References should follow the author (date) system. Do not cite manuscripts submitted or in preparation. Titles of journals should be given in full and should be listed at the end of the paper using the APA-7 format. This includes addition of active links to papers (in the form <https://doi.org/> ) where these are available. References should be listed in alphabetical order citing all authors. Personal communications and unpublished data are not to be listed in the reference list but should be mentioned in full in the text (e.g. A. Smith pers. comm., 2000). Use of Endnote is welcome.

### *Tables*

Tables should be self-contained and complement, but not duplicate, information contained in the text.

Tables should be numbered consecutively in Arabic numerals. Each table should be presented as a separate file with a comprehensive but concise title above the table. Column headings should be brief, with units of measurement in parentheses; all abbreviations should be defined in footnotes (using superscript letters). The table and its footnotes should be understandable without reference to the text.

### *Figures*

All illustrations (line drawings and photographs) are classified as figures and are printed in colour at no cost to authors. Figures should be cited in consecutive order in the text. Parts of figures should be labelled in lower case (e.g., Figure 2a, not 2A). Figures should be sized to fit within a column (81 mm), intermediate (117 mm) or full text (169 mm).

Line figures should be drawn professionally or with a computer graphics package. Lettering should be in a *sans serif* typeface. After reduction, the size of the capital letters should be about 2 mm. Allowance should be made for lines and text becoming smaller and thinner on reduction.

Individual photographs forming a composite figure should be of equal contrast, to facilitate printing, and should be accurately squared. Photographs and line drawings must have a scale; scale bars prevent potential error if a figure is reduced before publication. Electronic files of all figures must be uploaded on Manuscript Central at high resolution (300 dpi) as JPEGs, .eps, .tif (for images) or PDF (for graphs only). For more information on artworks, resolution and file formats see: <http://journalauthors.tandf.co.uk/preparation/artwork.asp>

Please do not type the caption for a figure on the artwork for that figure. A list of figure captions should appear at the end of the manuscript. The caption should incorporate definitions of any symbols used and all abbreviations and units of measurement should be explained so that the figure and its caption are understandable without reference to the text.

## Style details

The journal uses Australian spelling according to the latest Edition of the Macquarie Dictionary. Style should conform to the Style Manual for Authors, Editors and Printers.

Present simple formulae in the line of normal text where possible fractions should be written in the form x/y. Variables should be presented in italics. Powers of e can be denoted by exp. Number consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text).

SI units should be used. Statistics and measurements should always be given in numerals. Other numbers less than 10 should be spelt out.

Non-standard abbreviations must not be used in the text. Ga, Ma, ka should be used as units of time for both ages and time intervals and in expressions such as m/Ma.

Authors should provide coordinates for critical localities and the repositories for critical samples.

For papers dealing with Australia, authors should provide latitudes and longitudes using the GDA94 datum OR metric coordinates (six figures easting, seven figures northing with the zone) using the MGA94 datum; for other papers, authors should provide latitudes and longitudes.

The latest Geological Time Scale ([www.stratigraphy.org](http://www.stratigraphy.org)) should be used. Deviations from this should be discussed in the text.

Stratigraphic practice should follow the International Stratigraphic Guide (2nd edition) and Field Geologist's Guide to Lithostratigraphic Nomenclature in Australia; new stratigraphic names should be registered with the GA Australian Stratigraphic Units Database. Existing stratigraphic names can be checked on the Geoscience Australia Stratigraphic Database (<https://asud.ga.gov.au/>). Use the guide 'Defining a lithostratigraphic unit' (<http://www.ga.gov.au/data-pubs/datastandards/stratigraphic-units/unit-definition-form>).

## **AFTER ACCEPTANCE**

### **Online proof correction**

The corresponding author receives link to our online proofing system, allowing annotation and correction of proofs online. The environment is similar to MS Word: in addition to editing text, you can also comment on figures/tables and answer questions from the Copy Editor.

Web-based proofing provides a faster and less error-prone process by allowing you to directly type your corrections, eliminating the potential introduction of errors. If preferred, you can annotate and upload your edits on the PDF version.

All instructions for proofing will be given in an email sent to the corresponding author, including alternative methods to the online version and PDF.

We aim to get your article published quickly and accurately – please upload all of your corrections within 48 hours. It is important to ensure that all corrections are sent back to us in one communication.

Please check carefully before replying, as inclusion of any subsequent corrections cannot be guaranteed.

### **Use of the Digital Object Identifier**

The Digital Object Identifier (DOI) may be used to cite and link to electronic documents. The DOI consists of a unique alphanumeric character string, which is assigned to a document by the publisher upon the initial electronic publication. The assigned DOI never changes so is an ideal medium for citing or providing links to a document, particularly 'Articles in press' that have not yet received their full bibliographic information. Example of a correctly given DOI (in URL format; <https://doi.org.10.1080/08120099.2013.784219>) The DOI can be found on the first page of your proofs.

### **Benefits to authors**

All authors receive free access to their article on Taylor & Francis Online and access to 50 electronic reprints (E-print). You will be given access to the *My authored* works section of Taylor & Francis Online, which shows all your published articles and citations. You can view, read, and download your published articles from there.

Papers are published on-line as soon as the production process and copyright/ licensing transfers are completed. Papers will generally be assigned to the next available printed issue. Information on how you can promote and increasing the visibility of your article are provided on the [Taylor and Francis website](#).
